1. Overview

This is a mobile banking application developed by ABC Ltd. that provides end-to-end digital banking services on a single platform. It enables users to perform financial transactions, manage accounts and cards, open fixed and recurring deposits (FD/RD), and access investment services seamlessly.

2. Purpose

The purpose of this requirement is to provide customers with easy and secure access to manage their debit card controls through the mobile banking application. This includes enabling or disabling transaction types such as Point of Sale (POS), online transactions, ATM withdrawals, and contactless payments, thereby enhancing user control, security and convenience.

3. Business Objective

The objective of this requirement is to enhance customer experience by providing a secure and user-friendly feature that allows customers to manage their debit card transaction limits and control transaction channels such as Point of Sale (POS), Online, ATM, and Contactless transactions. This functionality aims to improve customer convenience, increase transaction security, reduce fraud risk, and minimize dependency on customer support or branch visits.

4. In Scope

1. Enable customers to manage **debit card transaction limits** through the mobile banking application
2. Provide options to **enable/disable transaction types**, including:
 - Point of Sale (POS) transactions
 - Online (E-commerce) transactions
 - ATM transactions
 - Contactless transactions
3. Allow customers to set and update transaction limits for each channel

5. Out of Scope

- Credit card limit management
- Physical card issuance or replacement
- Changes to bank-level default limits
- Third-party card management
- Dispute handling for failed/unauthorized transactions

6. Gap Analysis (As is / To be)

Area	Current System (AS-IS)	Gap Identified	Proposed System (TO-BE)
Limit Management	Not available in app	Missing feature	Available via UI
Transaction Control	No granular control	Lack of flexibility	Toggle-based control
Limit Setting	Manual via bank	No self-service	Slider + input field
Channel	Branch / Call center	No digital access	Mobile app
Transaction Types	Not separately managed	Missing segmentation	POS, ATM, Online, Contactless
Domestic/International	Not controlled separately	No segregation	Separate tabs
Real-time Update	Delayed/manual	System limitation	Instant update
User Experience	Poor	UX gap	Interactive UI
Security	Basic/manual	Weak security control	OTP/MPIN based
Audit Trail	Limited	Compliance gap	Full tracking

7. Proposed Solution

Table to be created in data base named DEBIT_CARD_LIMIT_DTL

Column Name	Data Type	Description
ID	NUMBER / INT (PK)	Unique record identifier
CUSTOMER_ID	VARCHAR(20)	Unique customer ID
ACCOUNT_NUMBER	VARCHAR(20)	Linked account number
CARD_NUMBER	VARCHAR(20)	Debit card number (masked if needed)
POS_LIMIT	DECIMAL(12,2)	Point of Sale transaction limit
ATM_LIMIT	DECIMAL(12,2)	ATM withdrawal limit
ONLINE_LIMIT	DECIMAL(12,2)	Online transaction limit
CONTACTLESS_LIMIT	DECIMAL(12,2)	Contactless transaction limit
POS_STATUS	CHAR(1)	POS Enabled/Disabled (Y/N)
ATM_STATUS	CHAR(1)	ATM Enabled/Disabled (Y/N)
ONLINE_STATUS	CHAR(1)	Online Enabled/Disabled (Y/N)
CONTACTLESS_STATUS	CHAR(1)	Contactless Enabled/Disabled (Y/N)
DAILY_LIMIT	DECIMAL(12,2)	Daily transaction limit

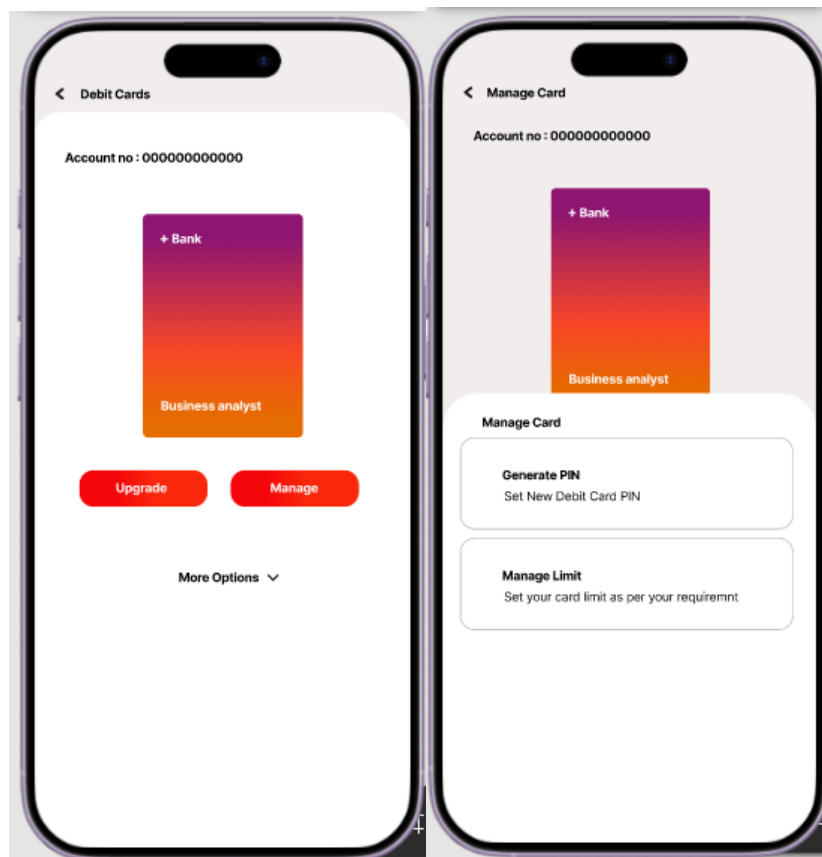

MONTHLY_LIMIT	DECIMAL(12,2)	Monthly transaction limit
CURRENCY_CODE	VARCHAR(10)	Currency (e.g., INR)
LAST_UPDATED_BY	VARCHAR(50)	User who updated record
LAST_UPDATED_DATE	TIMESTAMP	Last update timestamp
CREATED_DATE	TIMESTAMP	Record creation date

And new transaction type should be created in TRANQUE_LOG named CARDLMT where transaction details will be saved with newly generated transaction id and timestamp.

8. UI Implementation –

1. Navigation Flow

- User navigates to **Debit Card Section**
- Clicks on **Manage**
- System displays “**Manage Limit**” Option
- On click → Navigate to **Manage Limit Screen**

2. Landing Screen

- Display button: **“Set Transaction Limit”**
- On click → Open **Transaction Limit Configuration Screen**

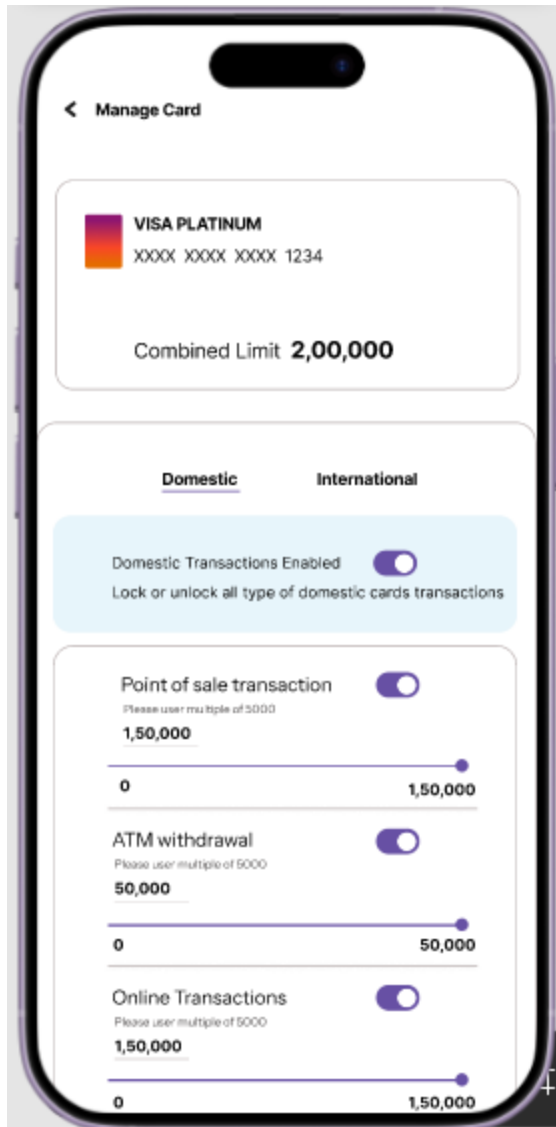

3. Tab Structure

- Two tabs:
 - **Domestic (Default Selected)**
 - **International**

4. Domestic Tab – UI Components

4.1 Master Control

- **Domestic Transactions Enabled – Toggle (ON/OFF)**
- Helper Text (small, grey): *“Lock or unlock all types of domestic card transactions”*

4.2 Transaction Controls with Slider + Input

- Toggle (Enable/Disable):
 - Allows the user to enable or disable the specific transaction type.
- Slider (Limit Management):
 - A draggable slider to set the transaction limit within the allowed range.
 - The transaction amount shall automatically update in real-time as the slider is adjusted.
- Editable Amount Field:
 - Allows the user to manually enter or modify the transaction limit value

4.3 Transaction Types

The following transaction types shall be supported under Debit Card Limit Management:

1. Point of Sale Transactions (POS)
2. ATM Withdrawal
3. Online (E-commerce) Transactions
4. Contactless Transactions

5. UI Behavior / Interaction Logic

5.1 Master Toggle Behavior

- If **Domestic Transactions = OFF**
 - All transaction types:
 - Disabled (greyed out)
 - Sliders inactive
 - Amount fields non-editable

5.2 Individual Toggle Behavior

- If a transaction type is **OFF**:
 - Slider disabled
 - Amount field disabled
- If **ON**:
 - Slider + input enabled

5.3 Slider Behavior

- Smooth drag interaction
- Real-time value update in amount field
- Respect predefined:
 - Minimum limit
 - Maximum limit

6. Validation Rules

- Amount must be:
 - Numeric only
 - Within allowed range
 - Greater than zero (if enabled)
- Error messages:
 - *"Limit exceeds maximum allowed value"*
 - *"Please enter a valid amount"*

7. Transaction Limit Save & Confirmation Flow (UI Implementation)

7.1. Save Action

- A **“Save” button** will be provided at the bottom of the screen to save the configured transaction limits.

7.2. Post Save – Review Screen

- On clicking the **Save button**:
 - The system will display a **review/confirmation screen**
 - All **updated transaction limits** will be shown to the user for verification

7.3. Confirm Changes

- A **“Confirm Changes” button** will be provided on the review screen
- On clicking **Confirm Changes**:
 - The system will prompt the user to enter **MPIN**

7.4. Authentication

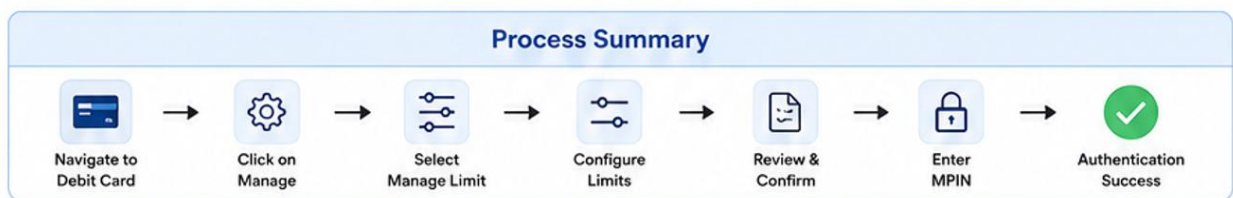

- User enters **MPIN**
- System validates the MPIN

7.5. Success Message

- Upon successful authentication and update:

Message Display:

- **Primary Message line (Bold):**
“Limits successfully updated”
- **Secondary (Small, Grey Text):**
“Your transaction limits have been updated successfully.”

7.6. Final Action

- An **“OK” button** will be provided
- On clicking **OK**:
 - User will be **redirected to the Debit Card Section**

9. Flowchart –

10. API Request & Response

API 1 - Get Card Limit

Purpose: Fetch existing debit card transaction limits and status

API 1					
Request			Response		
Parameter Name	Data Type	Description	Parameter Name	Data Type	Description
customerId	String	Unique customer identifier	status	String	SUCCESS / FAILURE
cardNumber	String	Masked debit card number	posLimit	Decimal	POS transaction limit
			atmLimit	Decimal	ATM withdrawal limit
			onlineLimit	Decimal	Online transaction limit
			contactlessLimit	Decimal	Contactless transaction limit
			posStatus	Char(1)	POS enabled (Y/N)
			atmStatus	Char(1)	ATM enabled (Y/N)
			onlineStatus	Char(1)	Online enabled (Y/N)
			contactlessStatus	Char(1)	Contactless enabled (Y/N)
			message	String	API response message

API 2: Update Card Limits

- Purpose: Update transaction limits and enable/disable status

API 2					
Request			Response		
Parameter Name	Data Type	Description	Parameter Name	Data Type	Description
customerId	String	Unique customer identifier	status	String	SUCCESS / FAILURE
cardNumber	String	Masked debit card number	message	String	Response message
posLimit	Decimal	POS transaction limit	transactionId	String	Unique transaction reference

atmLimit	Decimal	ATM withdrawal limit	timestamp	Timestamp	Transaction date & time
onlineLimit	Decimal	Online transaction limit			
contactlessLimit	Decimal	Contactless transaction limit			
posStatus	Char(1)	POS enabled (Y/N)			
atmStatus	Char(1)	ATM enabled (Y/N)			
onlineStatus	Char(1)	Online enabled (Y/N)			
contactlessStatus	Char(1)	Contactless enabled (Y/N)			
channel	String	Source channel (e.g., MOBILE_APP)			

API 3 Name: Authenticate User

- Purpose: Validate user before updating limits

API 3					
Request			Response		
Parameter Name	Data Type	Description	Parameter Name	Data Type	Description
customerId	String	Unique customer identifier	status	String	SUCCESS / FAILURE
mpin	String	Encrypted MPIN	message	String	Authentication result

11. Stakeholders and Sign-off

Name	Designation	Department	Signature	Date
Business Sponsor	VP Operations	Business Team		
Product Owner	Product Manager	Product Team		
Project Manager	PM	IT Team		
Business Analyst	BA	Business Analysis		
Compliance Head	Compliance Manager	Risk & Compliance
